

## Forestry safety equipment

The Pfanzelt forestry safety programme offers sophisticated forest protection devices for almost all agricultural tractor models of various manufacturers. Driver safety and the protection of the tractor cab, the technical systems, and the substructure are the top priority.

The range includes underride protection, transmission, engine, axle and tank covers, as well as a branch protection for the cab. Changing devices for fenders, lighting, and mirrors are also available.

### Convincing technical details:

- Optimum protection for the driver without obstructing vision
- Maintenance accesses for quick access to the technology despite protective devices
- Minimum impairment of the ground clearance by the floor pan
- Compact design and low dead weight by the use of high-strength fine-grain steels
