

Forwarding grapples RZ230

The RZ230 hydraulic grapple is supplied with a front loader and three-point hitch. This ensures a flexible use for the forwarding or loading of logs. The work can be carried out much faster with the forwarding grapples. This is effortless without getting off the tractor. Fixed lengths can be lifted and carried by a curved toothed bar between the lower links. An electrical switchover enables the grapples to open/close, or turn the rotator.

Convincing technical details:

- Mounting frame for front loader (Euro mount) and three-point linkage (Cat.II)
- Professional clamshell grapple with 0.23^{m2} cross-sectional area and 1.25 m opening width
- Electrical switching between grab and rotator (double-acting hydraulic connection required)
- Weight approx. 350 kg

Technical specification	RZ230
Mounting frame for front loader (Euro mount)	•
Mounting frame for three-point attachment (Cat. II)	•
Endless rotator	4.5 t
Grapple opening width	1,250 mm
Grapple cross section	0.23 m ²
Weight	approx. 300 kg
